Premium Practice Dentistry

Dental Business Consultant

Dental Wealth Builder

Regional Meetings Director

British Academy of Cosmetic Dentistry

COURSE DETAILS

Designing Smiles with No Preparation and Ultrathin Veneers

Learn the specific techniques to create beautiful smiles without reducing enamel or with minimal intervention.

With the rise of aesthetic dentistry in the media the public is becoming increasingly discerning: they demand and expect the best. No Preparation Veneers or Ultrathin Veneers provides a functional, highly aesthetic and durable alternative that is conservative of tooth structure.

Creating Exceptional Transitionals for The Perfect Smile

(Hands-on Course)

The function of the temporary in aesthetic dentistry has changed and is now an integral part of achieving the desired permanent result. The temporary now constitutes the 'trial smile' where the dentist, patient and technician have an opportunity to adjust the form and colour before proceeding to the fabrication of the final restoration. This avoids disappointment, remakes and cost.

The course will focus on how to design the smile and then convert this into the temporary so that any adjustments can be made. What to look out for and how to make these adjustments will be discussed. There will then be an opportunity to make some temporaries and practice adjusting them. The aim of the course is to provide a better understanding of the value of the temporary and how to achieve the desired result.

Predictable Post and Core

(Hands-on Course)

Increasingly tooth material is being retained and used for the support of aesthetic super structures. This course is designed to help dentists understand and then improve the clinical aspect of providing aesthetic posts and cores for patients.

The course will look at the design and fabrication of posts and cores so that the remaining tooth structure is minimally compromised and will endure for longevity. The materials and their use will be discussed so that monoblock fabrication of post and core is achieved. Fast, effective and easy post and core build up will be the aim of the course. The course will be for one evening and consist of a lecture followed by a guided hands on opportunity to build some posts and cores.
